Copy following query and paste in **Run query** section:

```
SecurityEvent
| where EventID == 4625
| project TimeGenerated, Account, EventID, IpAddress
| where IpAddress != "-"
| summarize count() by Account, EventID, IpAddress, bin(TimeGenerated, 1m)
| where count_ >= 5
```

Microsoft Azure | Search resources, services, and docs (G+/)

Dashboard > Microsoft Sentinel | Analytics >

Analytics rule wizard - Create a new Scheduled rule

General | **Set rule logic** | Incident settings | Automated response | Review & create

Define the logic for your new analytics rule.

Rule query
Any time details set here will be within the scope defined below in the Query scheduling fields.

```
where EventID == 4625
project TimeGenerated, Account, EventID, IpAddress
where IpAddress != "-"
summarize count() by Account, EventID, IpAddress, bin(TimeGenerated, 1m)
where count_ >= 5
```

Before attack

The screenshot shows the Microsoft Sentinel 'Incidents' page in a Microsoft Azure environment. The interface includes a top navigation bar with 'Microsoft Azure', a search bar, and a 'Copilot' button. The left sidebar shows the 'Threat management' section expanded, with 'Incidents' selected. The main content area displays 'Open incidents by severity' with counts for High (0), Medium (0), Low (0), and Informational (0). Below this, a message states 'No incidents were found' and provides information about what an incident is and how it works. The bottom of the page has a light blue decorative graphic.

After attack

The screenshot shows the Microsoft Sentinel 'Incidents' page after an attack. The 'Open incidents by severity' section now shows 1 High, 1 Medium, 0 Low, and 0 Informational incidents. A table lists the incidents, with the first one being a 'Brute Force Attack (Multiple failed login attempts)' with a severity of 'High'. The right sidebar is open, showing details for this incident, including 'Incident number 1', 'Unassigned' status, 'New' severity, and 'Evidence' section with 2 events, 1 alert, and 0 bookmarks. The bottom of the page has a light blue decorative graphic.

Severity	Incident number	Title	Alerts	Incident provider na...	Alert product name	Created
High	1	Brute Force Attack (Multiple failed login attempts)	1	Microsoft Defender ...	Microsoft Sentinel	07/20/25, 12:09 PM

2. NRT (Near real-time) rule demo. (Audit logs cleared in critical server example)

The screenshot displays the Microsoft Sentinel Analytics console. The left sidebar shows the navigation menu with categories like Threat management, Content management, and Configuration. The main pane is titled 'Active rules' and contains a table of rules. The 'Brute Force Att...' rule is selected, showing a severity of High, status of Enabled, and associated tactics and techniques. A 'Rules by severity' bar chart is visible at the top right, showing counts for High (1), Medium (0), Low (0), and Informational (0) rules. A message on the right states 'No analytics rules selected'.

[Next : Set rule logic >](#)

Copy following query and paste in **Run query** section:

SecurityEvent

| where EventID == 1102

| project Computer, EventID, EventLevelName, EventSourceName, Activity

The screenshot shows the 'Set rule logic' step of the 'Analytics rule wizard - Create a new NRT rule' in the Microsoft Azure portal. The 'Rule query' section contains the following Kusto query:

```
SecurityEvent
| where EventID == 1102
| project Computer, EventID, EventLevelName, EventSourceName, Activity
```

The 'Alert enhancement' section has 'Entity mapping', 'Custom details', and 'Alert details' expanded. The 'Event grouping' section has 'Group all events into a single alert' selected. The 'Suppression' section is empty. The 'Results simulation' section on the right shows a chart of the last 50 evaluations of the defined analytics rule.

The screenshot shows the 'Incident settings' step of the 'Analytics rule wizard - Create a new NRT rule' in the Microsoft Azure portal. The 'Incident settings' section has 'Create incidents from alerts triggered by this analytics rule' set to 'Enabled'. The 'Alert grouping' section has 'Microsoft Defender correlation activities can link other alerts or merge existing incidents to the generated incident, regardless of the alert grouping settings defined in the analytics rule.' selected. The 'Limit the group to alerts created within the selected time frame' is set to '5' hours. The 'Group alerts triggered by this analytics rule into a single incident by' section has 'Grouping alerts into a single incident if all the entities match (recommended)' selected.
